How do you find the square root of 80 | Wyzant Ask An Expert

Because you're taking the square root of 80, you want to look for numbers in your prime factorization that occur

twice. In this example you have 2 pairs of 2's. I've highlighted one pair and italicized the other pair so you can visualize it: $80 = 2 * 2 * 2 * 2 * 5$. If a factor occurs twice, you can pull it out of the square root; $80 = 2 * 2 * \sqrt{5} = 4 \sqrt{5}$, or 4 times the square root of 5.

SOLUTION: square root of 80 square root of 45

You can put this solution on YOUR website! First, factor the numbers within the square root signs. Every pair of identical numbers within the square root sign equals one of the same number outside of the square root sign.
